PRICING METHODOLOGY FOR DETERMINATION OF PREMIUM:

Two premium tables (Table A & Table B) are available for determining premium for Family Health Protector. Both tables must be used together in order to determine a premium for the entire cover offered to the members under Family Health Protector.

- a. **Table A** is designed to derive premium for **Highest Aged Member** of the family.
- b. **Table B** is designed to derive premium for **other than the Highest Age Member(s)** of the family depending upon their age.

Below mentioned steps must be followed for obtaining accurate premium.

Step 1: Obtain premium for "**Highest aged member**" from Table A as per corresponding Sum Insured and Age slab.

Step 2: Obtain premium for members "**Other than the highest aged member**" from Table B as per same Sum Insured as in Step 1 and their respective age slab.

Step 3: Add premium amount arrived in step 1 and step 2. This will be final chargeable policy premium; taxes at the prevailing rate is to be charged on the premium derived.

Same procedure will be followed in case a cover for critical illness is opted.

It is easier to manage these two tables and many people up to 12-15 members can also be easily calculated as it is simply picking up the premium from 2 tables.
